 Hardness 55 mg/L as CaCO3

Note: Analysis considers data from 7/1/2021 to 7/31/2022.
 (a) Reasonable potential to exceed water quality standard exists when the maximum predicted Cw exceeds any allowable Cw. If the maximum predicted Cw is greater than 50% of allowable Cw, monitoring requirements are likely during permit renewal.
 (b) For monitoring and compliance purposes if Total Chromium is less than the allowable Cw for Chromium VI, chronic, no limit or monitoring is required.
